Christ Community Church: Ladies' Christmas Night

Suzy Quilts Star Ornament

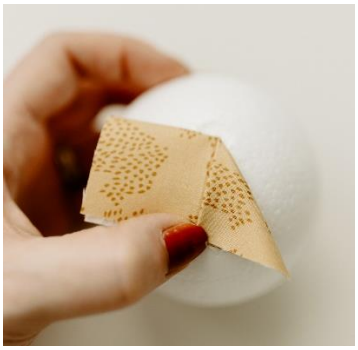

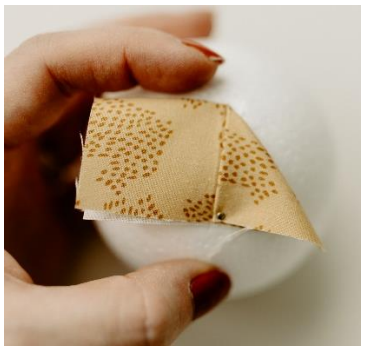

<u>Step 1: Pinning and Folding the Center Star (Yellow Fabic)</u>

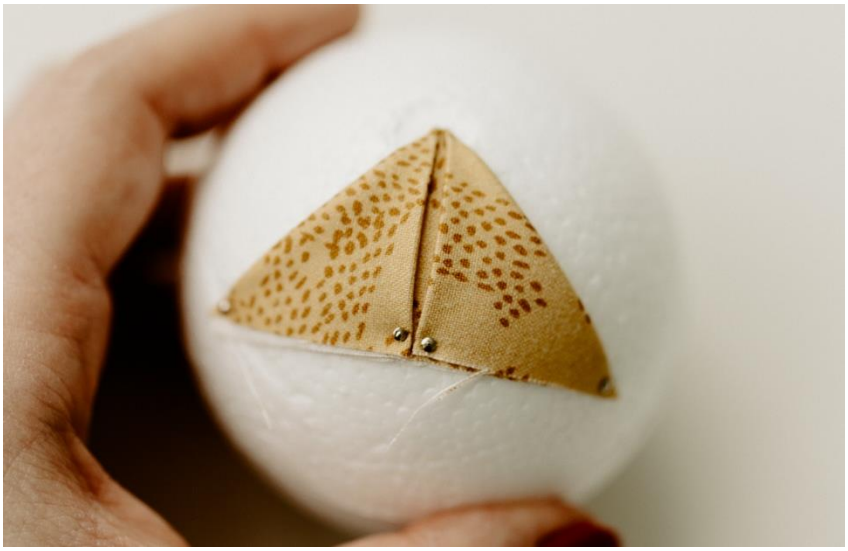

- Take one square of your center of star fabric and hold it in your hand, wrong side facing up. Take one dressmaker pin and push it through the fabric just below the center of the square.
- Then, push the pin into the styrofoam ball
- old the top of the fabric down, matching it to the bottom edge of the fabric. The right side of your fabric should now be showing, and your fabric square will be folded in half.

- Next, fold the upper righthand corner down, aligning it with the center crease. Place a pin to hold it securely against the ball.
- Flatten the remaining corner of the triangle against the ball and place a pin in the corner.
- Repeat the folding and pinning process for the opposite side, leaving a small gap down the center crease.

- Grab another center of the star fabric square, and repeat Step 2, placing the pin as close to the first pin as possible without overlapping. Create a mirrored image of the first triangle, keeping the center creases aligned.

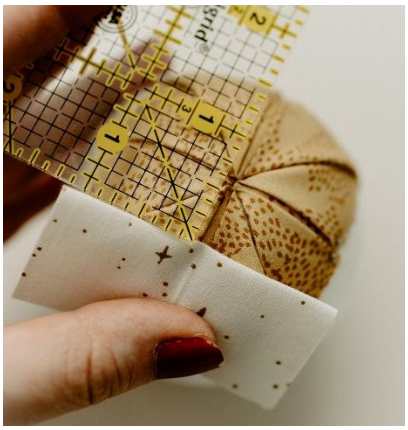

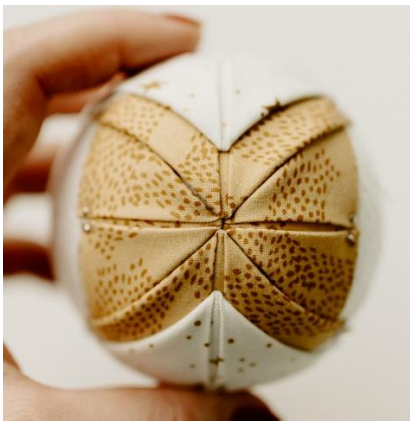

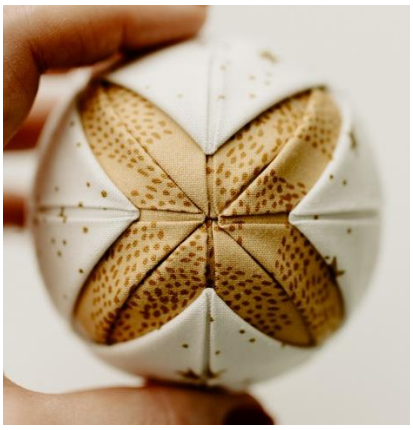

- Repeat this step to fill in the gaps between the triangles.

Step 2: Pinning and Folding the Middle Star (White Fabric)

- Next up is our middle star layer! Grab a square of your middle star fabric and place a pin through the center on the wrong side.
- Measure about 1/2" from the center, and place the pin into the center crease of one of the triangles.
- Fold and pin the square into a triangle, just like you did in Step 1. Repeat for the opposite side, then repeat for the remaining two sides.

- Before moving on to the next layer, we're also going to create triangles in the diagonals! Insert a pin into the wrong side of the middle star fabric and repeat the folding and pinning process on the four diagonals, working in pairs of opposite sides. This will create the star shape! See below:

Step 3: Pinning and Folding the Outer Star (Green Fabric)

- Our fabric star ornament is really starting to take shape! Now, let's add the outer star layer. Take a square of your outer star fabric and place a pin through the center on the wrong side.

- Measure about 1/2" from the center of the middle layer, and place the pin into the center crease of one of the triangles. Fold and pin to create a triangle, then repeat for the opposite and adjacent sides. Repeat this step for the diagonals as well.

Step 4: The Second Side

- Voilà! You're halfway finished, *and* I can tell you're getting into the swing of things! This side will come together even faster.
- Do your best to find the center of the opposite side of the styrofoam ball. I'm not too particular, so I just lay the ball face down on the side I just finished and eyeball what appears to be the middle of the blank side.
- Repeat Steps 2-5 to create side two of your fabric star ornament.

Step 5: Adding the Screw Eye

- Fire up your hot glue gun! Decide which side of your ornament will be the top. I usually shoot for a side where there isn't a whole lot of fabric from the two sides overlapping, which makes it easier to insert the screw eye.
- Push the screw eye into the center of the top of your ornament to "pre-drill" the hole. Take it out, add some glue to the end, and reinsert it into the hole as shown below so that the hole is aligned with the sides of the ornament.

Step 6: Adding the Ribbon

- Fold one end over 3/8" or so and glue it to create a nice finished end that won't fray.
- Butt this end of the ribbon snug against the screw eye. Begin gluing the ribbon down around the ornament. When you get about 3" from the end or so, figure out how much of the end to fold under to have it fit snugly against the opposite side of the eye screw.
- Glue the raw edge under just like you did with the other end, then continue gluing the last bit of ribbon down, butting the finished end up against the other side of the screw eye.
